

Enhance Audit Performance and Productivity

ACLTM is the only software solution purpose-built for audit to enable efficient analysis of all transactional data across the enterprise, with the ultimate goals of driving operational performance, reducing audit cycle time, and assuring controls compliance.

ACL 9 represents the continued evolution of ACL analytic technology and is focused on increased team collaboration and enterprise IT standards readiness.

AUDIT TEAM COLLABORATION

ACL 9 enhances the productivity of your audit team by enabling increased collaboration and the sharing of insights, analytic results, and best practices. Automation – the first step towards continuous auditing – is facilitated through team access to scripts, ACL Projects, and reports.

- Quickly and easily add comments or document/website hyperlinks to individual records, providing context for further analysis and report findings
- Centralize processing on the server to more easily share ACL Projects and extend data reach to increase productivity and coverage
- Share ACL Projects with international colleagues regardless of language or data format, saving time and increasing data access

ENTERPRISE IT STANDARD READINESS

ACL 9 meets global enterprise IT standards, running effectively on enterprise servers and minimizing the impact on system and network performance. ACL is offered in both Unicode and non-Unicode making it easily deployed across your organization and global audit function.

- Reads Unicode and non-Unicode (separate versions) data allowing universal usage regardless of language, data format, or location, improving utility
- Reduce network traffic and preserve the security and integrity of the data with expanded server-side data accessibility and reach
- Schedule scripts to run off-line during non-peak hours and leverage the capacity, processing power, and security of corporate servers

ACL provides you with the confidence that you are seeing the complete picture and working to maximum efficiency – furthering your team's ability to detect/prevent fraud, minimize revenue leakage, support compliance, and improve overall business performance.
