ACL CONNECTOR FOR USE WITH SAP® ERP

Remove barriers to data access and tap into powerful intelligence.

Business-critical SAP applications hold a gold mine of powerful information waiting to be uncovered. But directly accessing SAP data is no easy task.

Pre-built reports and built-in tests don't go far enough to provide risk assurance for executives, board, or oversight committee. Instead, you need to access to all of your data, at any time, to respond to changing risks and get immediate answers to questions as they come up.

Accessing SAP application data doesn't need to be painful. ACL Connector for use with SAP® ERP is an easy-to-use SAP-certified data extraction add-on for ACL Robotics, ACL Analytics, and ACL Analytics Exchange. It gives you direct, secure business intelligence from most SAP applications. This connector empowers your team to easily include SAP data in analysis, leading to more complete coverage and better, faster answers.

DIRECT, SEAMLESS, DATA ACCESS

Stop bugging IT. ACL Connector for use with SAP® ERP helps increase productivity by allowing teams to easily and securely access SAP S/4HANA, SAP® ERP, SAP® CRM, SAP® SRM, SAP® SCM or SAP® EWM data for analysis, instead of waiting for IT or incurring delays due to miscommunication.

DATA INTEGRITY

Ensure that production data will be unaltered. Read-only queries are executed on the SAP system by ACL Connector for use with SAP® ERP.

SECURE

Ensure users only have access to authorized data. ACL Connector for use with SAP® ERP uses SAP security to determine access rights and encrypts the data on extraction.

COMPARE DATA BETWEEN BUSINESS SYSTEMS

Filter and find field names quickly. SAP applications are loaded with more fields than you could ever use and many of them are empty. ACL Connector for use with SAP® ERP provides an easy method to find the information you need within the tens of thousands of available tables. This intuitive interface allows you to execute SQL-type queries to surface and interpret your data.

REFRESH QUICKLY

Grab the most recent version of the data. With a simple right-click > Refresh.

ANALYTICS-READY DATA

Automatically format SAP data for ACL analysis. Application data typically must be manipulated and reformatted to be consumable by analysis tools. ACL Connector for use with SAP® ERP simplifies and streamlines the process by automatically formatting SAP data for use with ACL Robotics, ACL Analytics, or ACL GRC Analytics Exchange during the retrieval process.

TRUSTED BY SAP PROFESSIONALS

SAP-certified integration. ACL Connector has achieved SAP-certified integration with SAP ERP, SAP CRM, SAP SRM, SAP SCM and SAP EWM.

SAP® Certified
Integration with SAP NetWeaver®

SAP® Certified
Integration with Applications on SAP HANA®

ACL ESSENTIALS

Pre-built tests for SAP applications

Your built-in process controls are most likely not working as well as you think they are. Simple tests with complex configuration can lead to significant mistakes that can go unnoticed.

Reduce risk and gain insight into the critical areas of your SAP system with ACL Essentials—a suite of premium, pre-built analysis apps that continuously assess risk in your critical SAP processes.

TABLE AND FIELD NAME TRANSLATION

Avoid confusion. With thousands of tables in SAP applications with non-intuitive table and field names, knowing what data the tables represent and which ones are relevant for analysis is a mind-boggling task. ACL Connector for use with SAP® ERP gives you the option to have field names translated to your own language or to retain the original SAP German abbreviated field names.

SIMPLE RE-USE

Re-use your data queries. After finding the tables and fields required for your analysis, your query can be saved for use at a later time. Or use it as a starting point for your next analysis task that requires similar data. Or, automate your extractions by generating a single ACL command to re-use in your scripts.

LOW IMPACT

Extract data without impacting the performance or availability of SAP applications. The ACL Connector for use with SAP® ERP compiles all records into a single table. The compilation is done in chunks so it's easier for the SAP application to process.

AUTOMATED

Reduce, reuse, recycle. Routine data retrieval and data analysis procedures can be executed via ACL scripts, thus enabling re-use and repeatability for economies of scale and increased productivity. With ACL Robotics and ACL GRC Analytics Exchange, data retrievals can be run nightly to provide the latest results to the team when they arrive first thing in the morning, or provide data to a continuous testing process.

PRODUCTIVITY ECOSYSTEM

Training, best-practices and productivity boosters built-in.
To help you succeed, we have created a productivity ecosystem. Your subscription includes access to online training, a library of pre-built risk analysis scripts, a rich knowledge base, an inspirations platform of ideas, and complete user guides.

> *ACL Connector for use with SAP® ERP provides a nice interface to SAP, interpreting the data well and laying it out in plain English, which makes the results so simple to understand–even for a complete novice to SAP systems.*
